

## **STEVEN M. GUNN, PE**

During his more than twenty years of experience at Keeler-Webb Associates, Mr. Gunn has been involved with a wide array of engineering projects, covering the fields of forensic engineering and investigation, structural design and analysis, civil/site design and surveying.

Mr. Gunn has valuable and extensive experience in the firm's forensic engineering practice. He has conducted thousands of engineering investigations covering many subjects, including: structural collapse, construction defects, structural repair/retrofit, roof damage assessment, water intrusion, foundation settlement, storm damage assessment, reconstruction feasibility assessment, loss restoration, and many others.

Mr. Gunn has provided expert testimony in depositions and jury trials regarding forensic investigations in which he has participated.

His work in the structural design field includes the engineering of a wide variety of structures, including retail buildings, office buildings, restaurants, hotels, multi-family residential buildings, private residences, storm water structures, agricultural structures, warehouses, and many others.

In addition to his structural design experience, Mr. Gunn has been involved with numerous civil engineering projects. Some of these include the engineering and design of numerous building sites, as well as boundary and construction surveying.

Mr. Gunn is a registered Professional Engineer in the State of Ohio and has provided forensic consultation throughout the United States including Indiana, Kentucky, Illinois, Mississippi, Ohio, Louisiana, and Missouri.
